SUMMARY

Software engineer with 3 years of professional experience and a solid foundation in popular programming languages, web technologies, databases, and frameworks. Diverse background of experiences, such as building highly reliable legal software to improve the accessibility of the justice system, 4D pathfinding for lunar rovers, wireless power transmission to sensors embedded in bridges, and a MERN (MongoDB, Express.js, React, Node.js) course for 100+ high school students.

EDUCATION

Bachelor of Engineering (Software Engineering)

McMaster University

EXPERIENCE

Software Developer

Aversan | November 2023 - January 2024

- 3-month contract to lead the software testing for a medical device, covering tool validation, unit testing, static analysis, SAST and SCA remediations, and the creation of test documentation.

Development Lead

SGAC | June 2023 - October 2023

- Led the development of pathfinding algorithms for autonomous lunar rovers, with a focus on demonstrating the efficiency and collision avoidance benefits of 4D LIDAR in rover swarms.

Software Developer

Clio | January 2022 - August 2022

- Developed Clio's Outlook add-on following SCRUM methodology with a team of 4 developers, enabling clients to seamlessly file millions of emails to Clio's management platform.
- Designed and implemented an endpoint feature for selective re-filing of individual emails, enhancing user control and addressing a critical user concern.
- Investigated, identified, and resolved the top 20 most prevalent bugs reported for the Clio Outlook add-on, leading to enhanced performance and an improved user experience.

Full Stack Course Developer

CreationCamp | September 2021 - April 2022

- Developed and taught a 4-month long full stack web development course for a class of high school students, covering HTML, CSS, JavaScript, MongoDB, Express, React, and Node.js.
- Designed, developed, and taught web development workshops to 100+ high school students.

Cloud Software Developer Intern

SOTI | May 2021 - August 2021

- Migrated 84 backend frameworks to .NET, resolving dependencies and writing full test coverage.
- Implemented application-side caching, reducing SQL server calls by over 90% per minute.

PROJECTS

Utrition (2023): Utrition helps users track their progress towards their health goals. Users can upload a picture, speak, or type out their food in natural language, and Utrition provides all the nutritional data of the meal and saves it in the user's profile. The profile contains statistics and data visualizations to assist users in tracking their nutrition goals. **Stack:** Python, Flask, JavaScript, React, AJAX, Tensorflow, Git

NooTab (2023): A minimalist new-tab extension for Firefox and Chrome that offers a customizable layout and seamless access to search, calendar scheduling, and note-taking. **Stack:** HTML/CSS, JavaScript, Git

Questly (2022): Web application for middle school teachers to deliver computer science education. It provides an online classroom management system, grade-specific modules, assessments, walkthroughs, progress tracking, and grade reporting. **Stack:** Python, Django, PostgreSQL, HTML/CSS, JavaScript, Git

Ebook Genesis (2021): Python bot to find and download ebooks through the use of IRC channels. One of the only open-source IRC ebook bots. **Stack:** Python, Bash, Git

OTHER

Technical Skills: Python, Ruby, Java, JavaScript, HTML, CSS, React, Vue.js, Node.js, Django, Ruby on Rails, SQL, PostgreSQL, MySQL, MongoDB, Docker, Linux (Ubuntu/Debian), REST API, Git, GitHub Actions, CI/CD, PyTest, Jest, Cypress, ESLint, Mocha, Prowler, Sinon, Snyk, Unittest, Pytest, RSpec, Jira, ROS2
Languages: English (Native), Romanian (Fluent), French (Limited Working Proficiency)
